

CATCOM-RF is a wireless data link for all CATs to their expansion modules.

This powerful RF link is 2.4 GHz, spread spectrum, transmitting 200 mw of power with a range of 10,000 feet, line of sight.

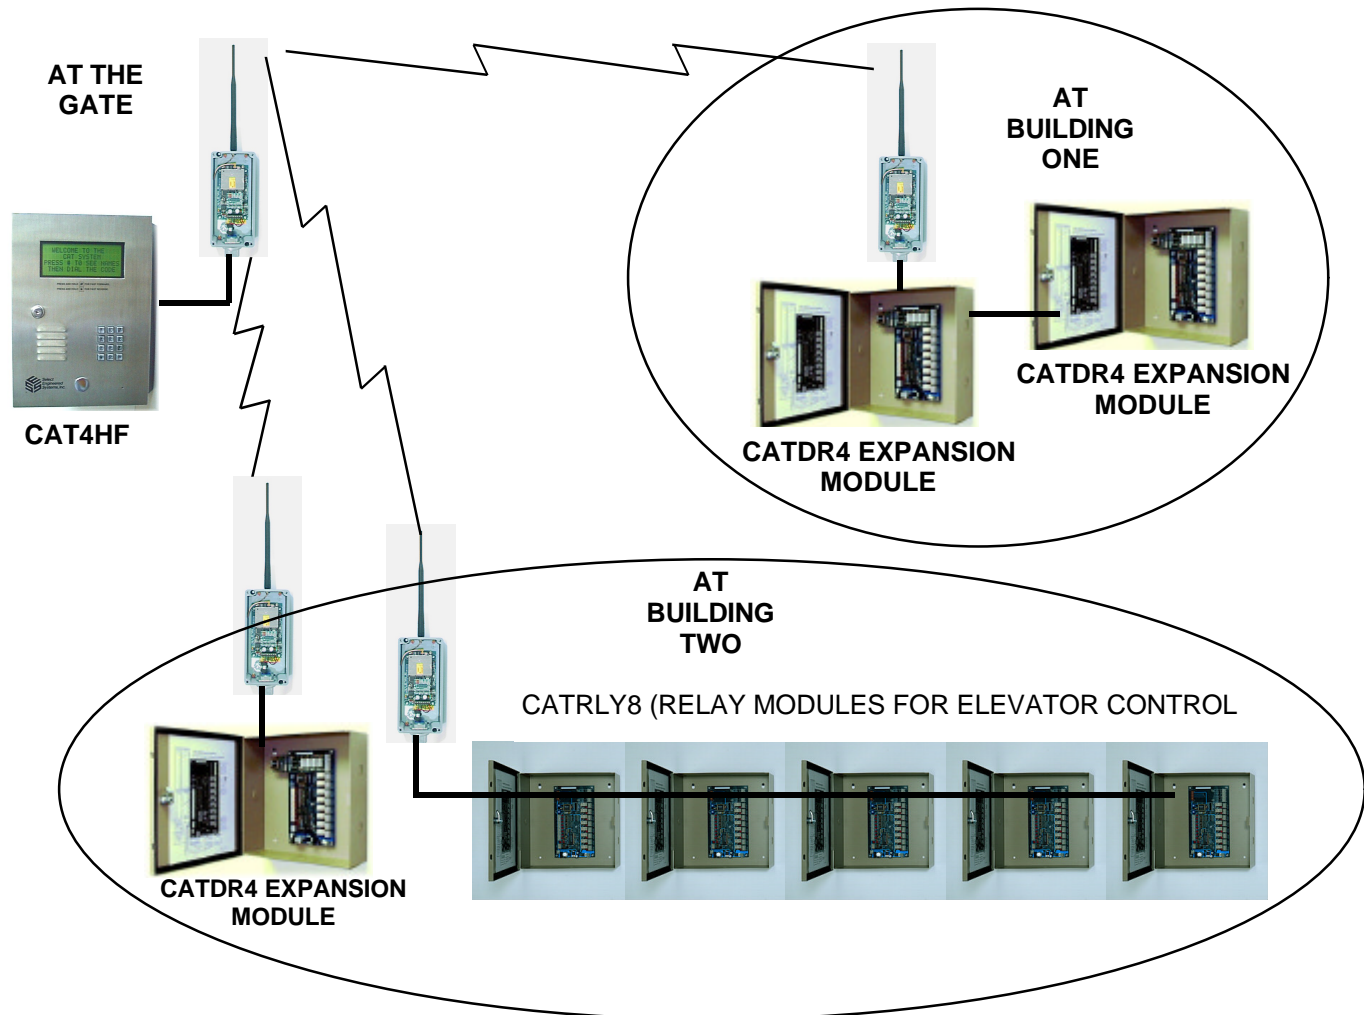

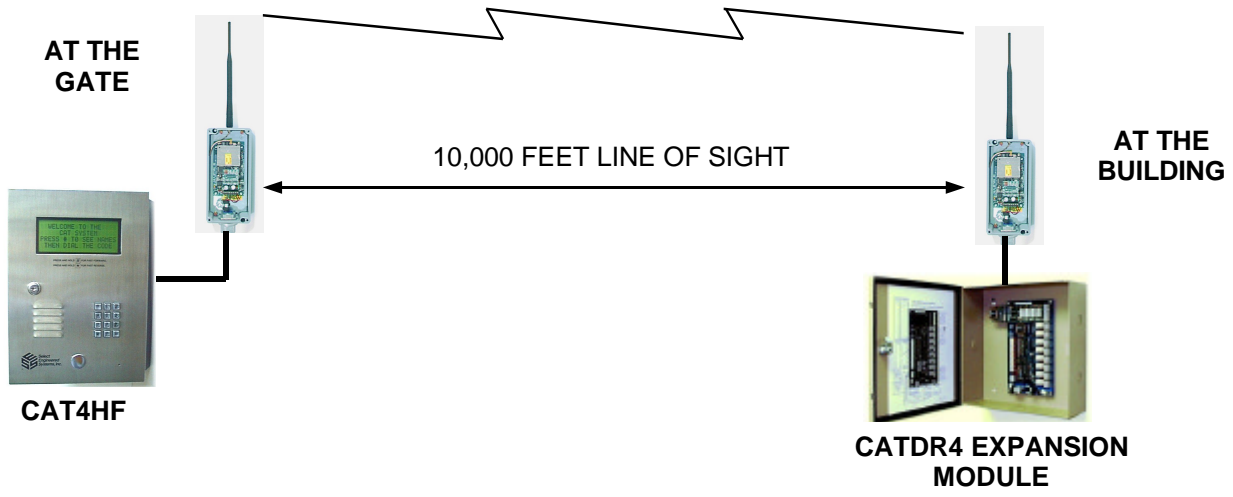

CATCOM-RF makes it possible to cross roads, parking lots and open areas without trenching or cutting, and can lower the costs for multi-entrance CAT sites.

CATCOM-RF STANDARD FEATURES

- Replaces RS485 wiring for data transmission.
- Can be used on either CATDR4 or CATRLY8 expansion modules.
- Can be used as a wireless link from the CAT to the first expansion module, and then use wire to the next or the rest of the expansion modules.
- Compatible with all CATs utilizing expansion modules.
- Powered by the CAT and expansion modules, no external power needed.
